Final-year Mechatronics Engineering student with expertise in industrial automation, PLC and microcontroller-based control systems, SCADA integration, and electrical applications. Strong foundation in PID control, system testing, and process simulation, aiming to grow in reliability and automation engineering within manufacturing.

Education

Universitas Negeri Yogyakarta

Bachelor's Degree in Mechatronics Engineering

2021 – Present

Technical Project

Industrial Automation Project – Centrifugal Oil Spinner Machine Development (2025)

- Designed and prototyped a centrifugal oil spinner machine using SolidWorks, Fusion 360, and Mastercam for 3D modeling, mechanical design, and manufacturing preparation.
- Integrated DC motor system with PWM speed controller and implemented MATLAB-based PID control for stable multi-level rotational speed regulation.

Automated Mixing & Filling System – IoT SCADA Based Process Control (2025)

- Designed and implemented an industrial automation system using Arduino and IWS SCADA, integrating servo-controlled valves, mixer motor, cup rotator, DHT11 temperature and humidity sensor, emergency stop system, I2C LCD, and buzzer via serial TX/RX communication.
- Built a state-machine based process control architecture, real-time monitoring dashboard, and recipe & batch management system using MS Access database, with full hardware/software integration and virtual COM debugging (com0com & hub4com).

Organizational Experience

UKKI Jamaah Al-Mujahidin UNY

Head of tool and logistic Division – Islamic Youth Fair 2022

- Managed event equipment and logistics operations.

BEM FT UNY

Staff Event Division PKKMB FT 2022

- Supported technical preparation and operational execution of faculty orientation programs.

Kemahasiswaan UNY

Head of Publication and Documentation Division – UKM Expo 2023

- Led event documentation and media publication activities.

Technical Skills

Programming

- C++ • C# • Python • SQL • HTML

Automation

- PLC • HMI • PID

Design

- AutoCAD • Sketch Up • Solidworks
